deep

arshore
row

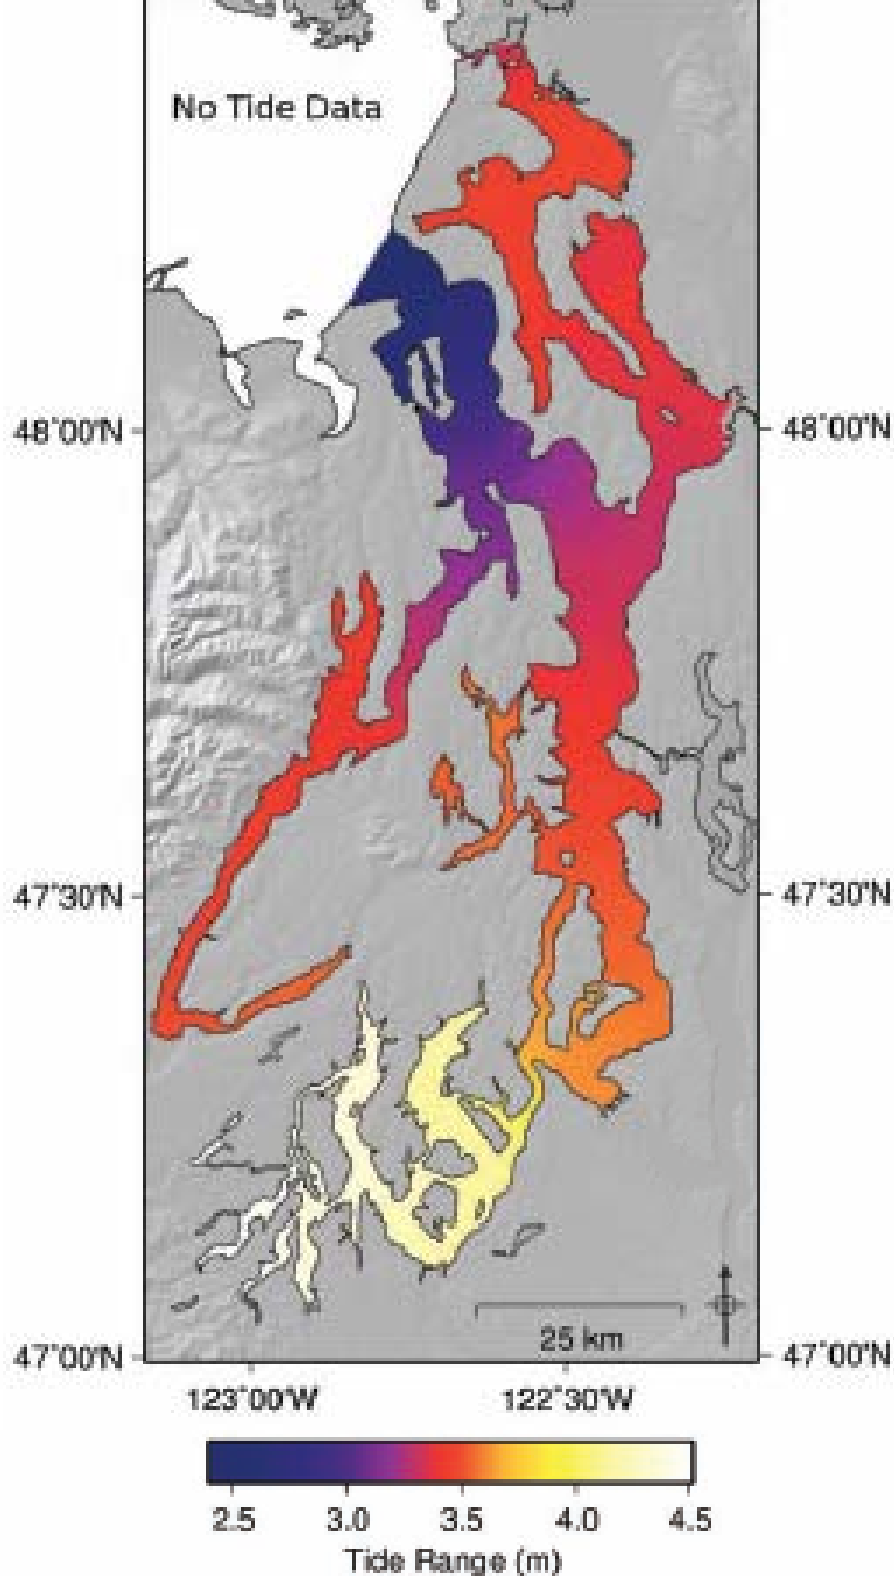

Implications for the ecosystem:

- It is only a narrow “fringe” of nearshore habitat that supports many species at some point in their life cycle
- Because narrow, we have less ‘leeway’ regarding destruction of nearshore habitat
- Removing or degrading a portion of the nearshore habitat in Puget Sound does not have the same proportional effect on the living system as in a shallow, flat estuary

ound es

- **Tidal range:**
2.5 – 4.5 meters
- **Tidal prism:**

Puget Sound circulation is retentive

of Juan de Fuca

Ta

Implications for ecosystem:

- Inputs to Puget Sound stay around for a long time...
 - Long-lasting effects that can be decoupled from source elimination
- Biota in Puget Sound have a high degree of residency
- Both good and bad: this is why Puget Sound is highly productive, but also highly retentive of contaminants

- ▶ Armored now: 810

decline in

- ▶ Seabirds: 1980's – 2000's: 57-90%
- ▶ Cherry Point herring: 1970's – 2000's: 90%
- ▶ Rockfish egg production: 1970's – 2000's: ~90%
- ▶ Resident Orca whales: 1996 – 2003: 15%

Puget Sound Partnership

our sound, our community, our chance

R MISSION

ate a single, unified Action Agenda to guide the
ection and restoration of Puget Sound by 2020.

ement the Action Agenda

e public awareness regarding threats to the
nd and channel energy and resources into
ecessary actions.

l the entire system accountable for results.

ies and food webs:

hy, sustaining populations of native species in Puget Sound, including a robust food

er quantity:

*and stream flow and ground water levels sufficient to sustain people, fish, and wil
he natural functions of the environment*

at:

*althy Puget Sound where freshwater, estuary, nearshore, marine, and upland
ats are protected, restored, and sustained*

er quality:

*rs and sediments of sufficient quality so that waters are safe for drinking, swimming
ish harvest and consumption, and other human uses and enjoyment, and are not
ful to the native marine mammals, fish, birds, and shellfish*

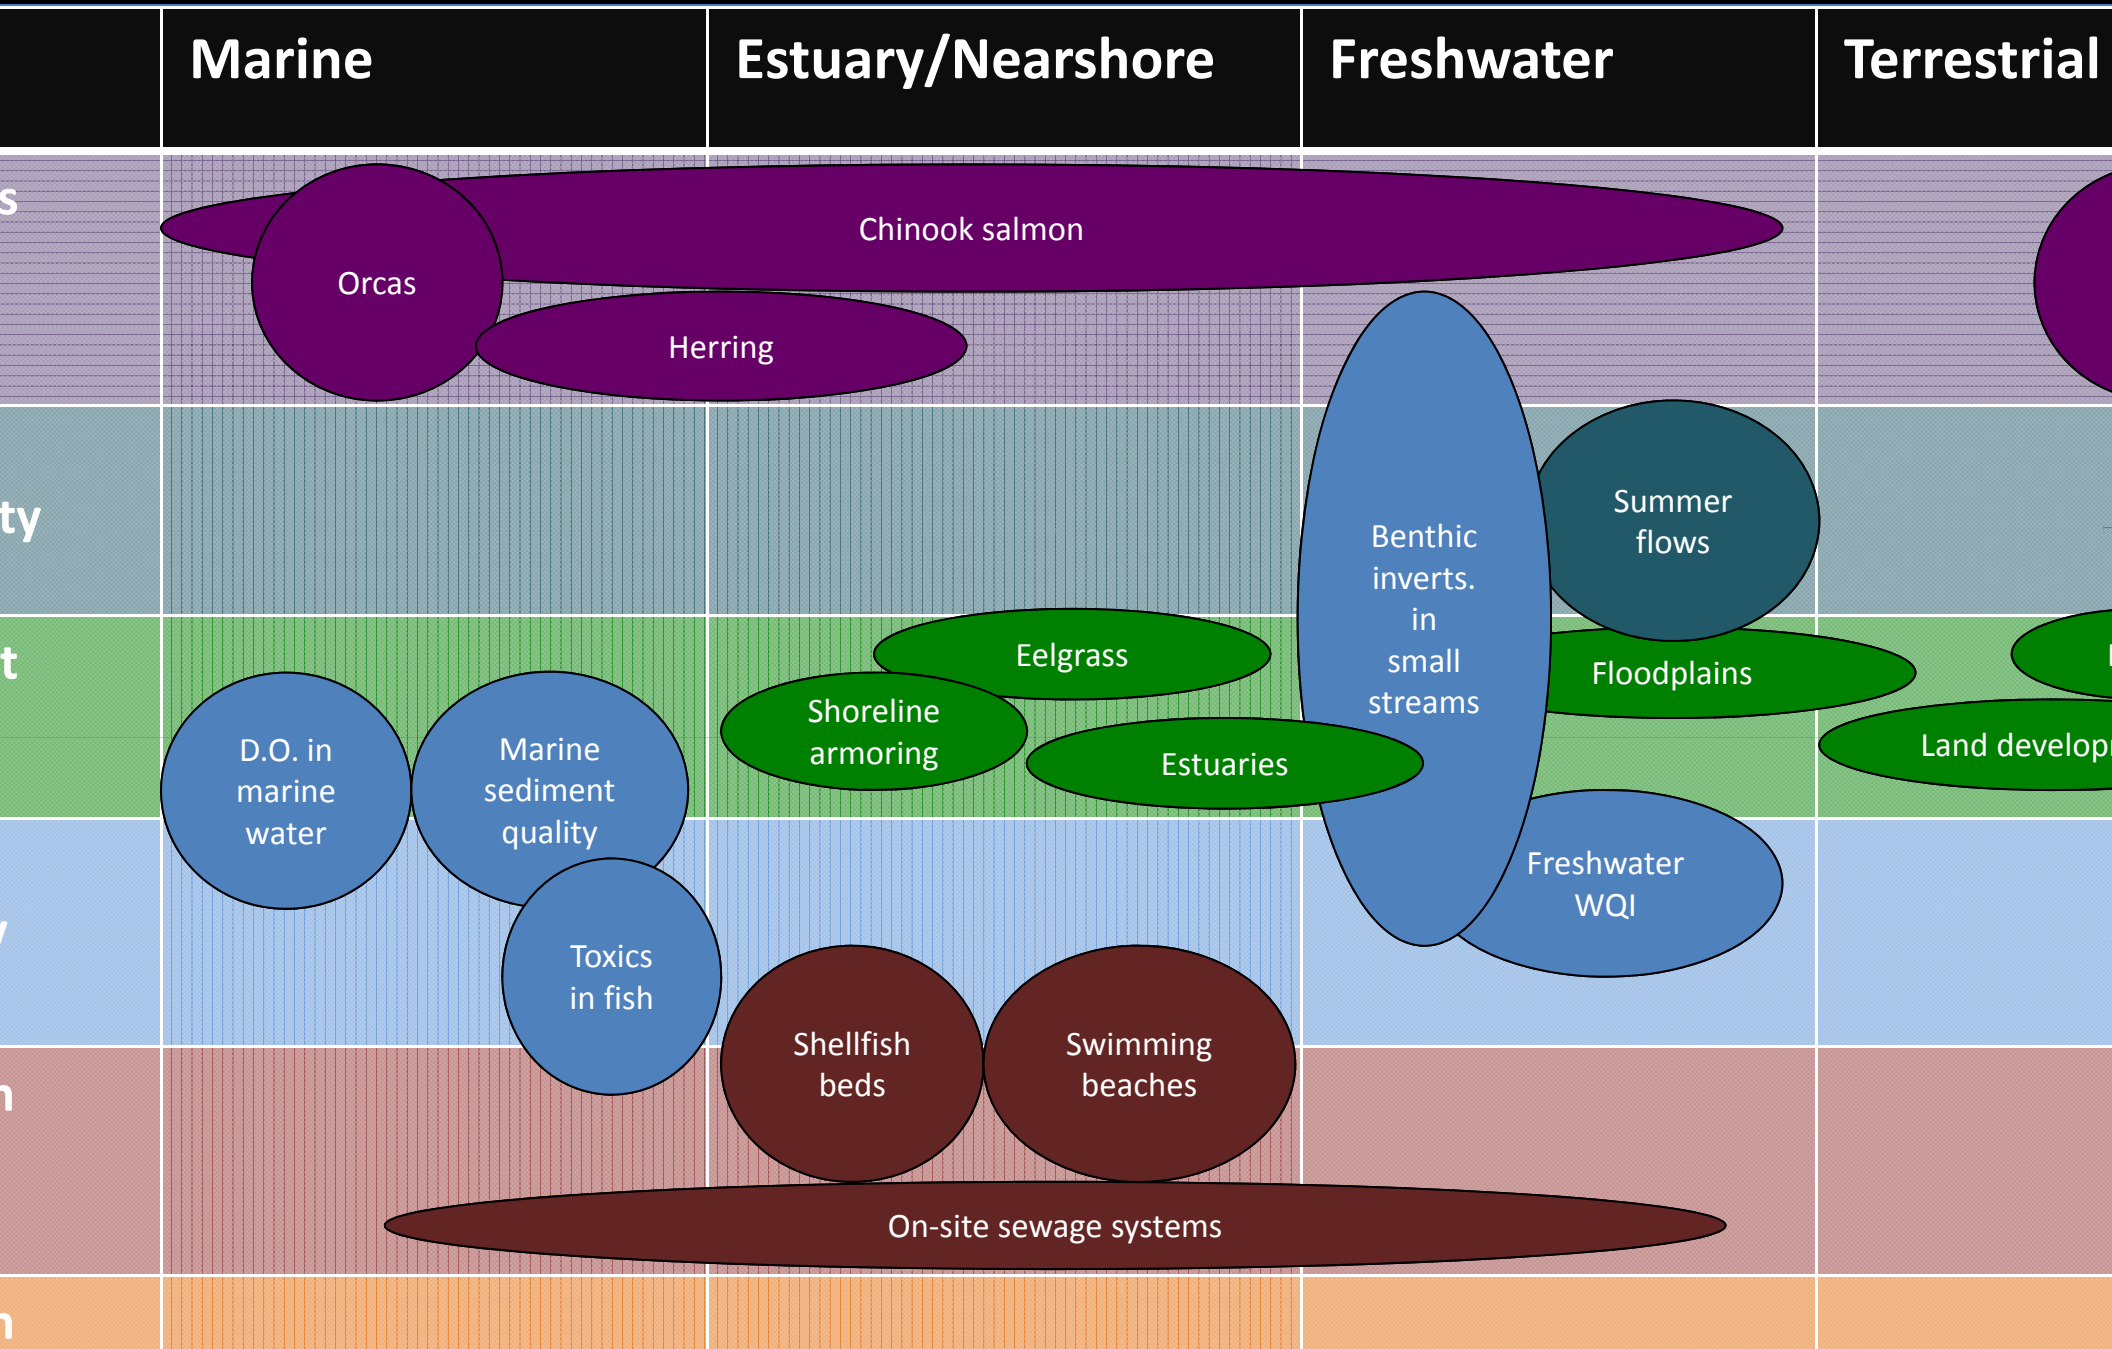

an health:

lthy human population supported by a healthy Puget Sound

an quality of life:

tties of fish and wildlife, and the health of the environment. Puget Sound

2020 targets to address Puget Sound ecosystem recovery

- Protect
- Restore
- Prevent water pollution at its source
- Work together
- Implementation, monitoring, and accountability

Differences between Hood Canal and Puget Sound

Within Hood Canal

Within Puget Sound

12-Aug-2010 16:07:03

12-Aug-2010 12:10:02

Basins

- Hood Canal: slow circulation
- Main Basin: fastest circulation
- Whidbey Basin: most freshwater input
- South Sound: strong mixing, slower circulation

ORCA buoys

4 buoys, 4 locations...

- 1) North of HC Bridge
- 2) Hama Hama River
- 3) Hoodsport
- 4) Sister's Point

**Part of NAM
Observing**

Fundamental Issue:

We are limited and poorly coordinated with respect to environmental data supporting fundamental societal needs

gress. We need a system that
fill societal needs for ocean data

Must be sustained

Must be driven by users

Must be responsive to regional needs

Must fill needs from end to end

**The Integrated Ocean Observing
System is designed to fill this need**

Seven goals, one system

Improve predictions of ***climate change and weather***

Improve the safety and efficiency of ***maritime operations***

Improve forecasts of ***natural hazards*** and mitigate effects

Improve ***homeland security***

Minimize ***public health risks***

Protect and restore ***healthy coastal ecosystems***

Sustain living marine ***resources***

Marine water monitoring strategy

Use different platforms to get different information, collectively yielding full picture:

Fixed profiling moorings: Located in the major basins, these autonomous assets are used to collect data to evaluate high-resolution dynamics, interannual variation, and effects from processes such as tidal forcing. The data enable the calculation of net transport over tidal cycle, provide input for dynamical models, and key real-time data that can be used for early warning system e.g., ocean acidification.

Fixed depth moorings: These autonomous assets provide more spatial definition, especially in bays/inlets and in well mixed areas. The data enable the calculation of inter-basin tidal and net transport of oxygen, freshwater and tidal height (weather-related anomalies) as well as provide information about the system-wide signal and propagation of water quality variables.

Light/ship based system: The data will provide the opportunity for high quality sensor calibration, thus assuring accuracy and inter-calibration of the autonomous sensors networks over time.

NANOOS

NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS

Welcome to NANOOS, the Pacific Northwest regional ocean observing system of IOOS (Integrated Ocean Observing System), an integrated network of [regional systems](#).

NANOOS is creating customized information and tools for Washington, Oregon, and Northern California with these areas of emphasis:

- ♦ [Maritime Operations](#)
- ♦ [Ecosystem Assessment](#)
- ♦ [Fisheries & Biodiversity](#)
- ♦ [Coastal Hazards](#)
- ♦ [Climate](#)

NOTEWORTHY

NANOOS Visualization System - Version 2.5

Announcing the release of NVS 2.5. New features include settings for how units are displayed and the range of plot y-axis. If you are logged into your myNANOOS account, the settings are automatically saved. New forecast overlays from CMOP (Coastal Margin Observation & Prediction) and NAM (North American Mesoscale) are also available. Try NVS 2.5 and tell us what you think.

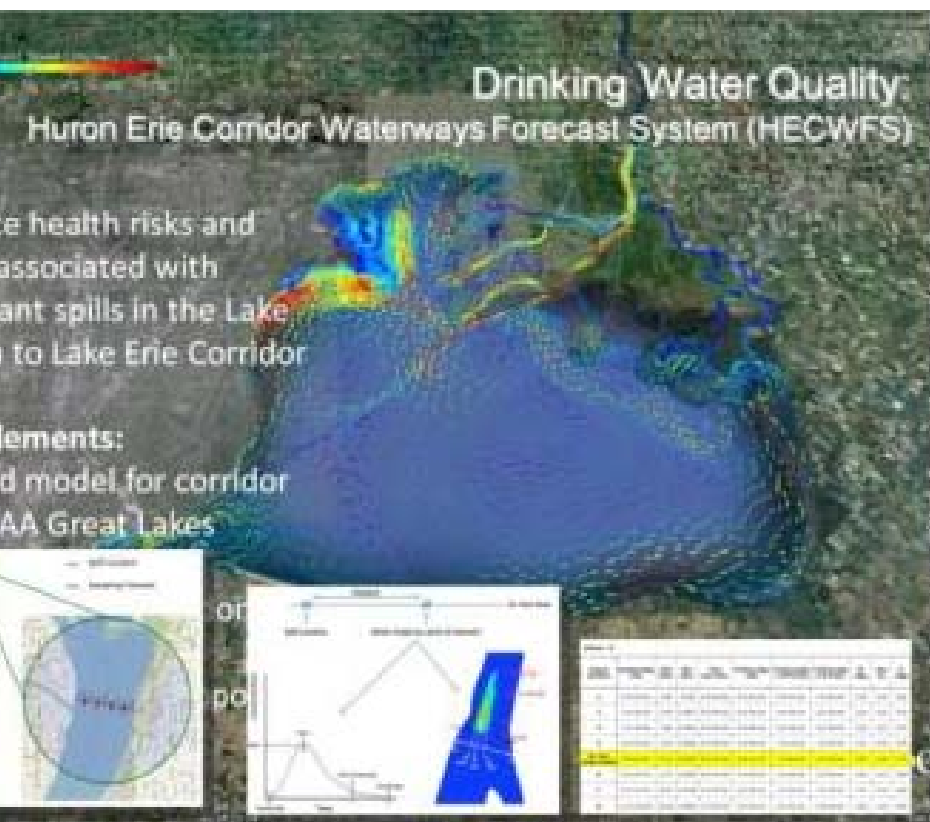

Honshu Earthquake and Tsunami 2011

An informational page about the magnitude 9.0 earthquake that occurred off the eastern coast of Japan on March 11, 2011, and the resulting tsunami that hit the US Pacific Northwest 9 hours later.

Tsunami Evacuation Zones for the Oregon Coast - Interactive Map

The Oregon Department of Geology and Mineral Industries and the NANOOS User Products and DMAC team, is pleased to announce the release of new tsunami inundation maps developed for the southern Oregon coast (Bandon to Brookings) and for Cannon Beach on the north coast, now accessible through the NANOOS/DOGAMI Tsunami Hazards Portal.
